Originally published in 1959 and revised and expanded in 1989, this book asserts that Africans had contributed more to the world than was previously acknowledged. Historian Joel Augustus Rogers devoted a significant amount of his professional life to unearthing facts about people of African ancestry. He intended these findings to be a refutation of contemporary racist beliefs about the inferiority of blacks. Rogers asserted that the color of skin did not determine intellectual genius, and he publicized the great black civilizations that had flourished in Africa during antiquity. According to Rogers, many ancient African civilizations had been primal molders of Western civilization and culture.

Haykin examines both the mathematical theory behind various linear adaptive filters with finite-duration impulse response (FIR) and the elements of supervised neural networks. This edition has been updated and refined to keep current with the field and develop concepts in as unified and accessible a manner as possible. It: introduces a completely new chapter on Frequency-Domain Adaptive Filters; adds a chapter on Tracking Time-Varying Systems; adds two chapters on Neural Networks; enhances material on RLS algorithms; strengthens linkages to Kalman filter theory to gain a more unified treatment of the standard, square-root and order-recursive forms; and includes new computer experiments using MATLAB software that illustrate the underlying theory and applications of the LMS and RLS algorithms.
