As it was considered essential for anyone using these methods to be fully conversant with the basic principles of the methods and of the instruments used, the manual has been devoted for describing the broad principles underlying the methods described. The research techniques were described under seven different heads, i) Techniques in grazing experiments ii) In-vitro feed analysis iii) In-vivo feed analysis, iv) Analysis of chemical constituents in feed and plant material v) Analysis of ...

Analysis of rumen liquor for fraction of VFA's enzymatic activity of various metabolites and estimation of rumen fluid volume and its flow rate are covered in depth. It was followed by estimation of anti-nutritional / toxic factors in various un-conventional feeds using HPLC / Spectrophotometer, detail analysis of milk and body condition scoring for dairy cattle are included as assessment of these parameters are important in Ruminant Nutrition Research. Necessary practical work is included; the exhaustive details have been avoided, since the manual is primarily meant for postgraduate scholars, teachers, scientists and feed industry personnel use.
