The must-have optical training system whether you are an optometrist, ophthalmologist, or optical manager responsible for training opticians or are an optician trying to better your skills. Training opticians, new and seasoned, is a daunting task. Are new opticians ready to hit the floor running? Are seasoned opticians remembering the principles that make a good pair of glasses great? These are the questions this book will answer in an easily implemented fashion. Not a text filled with equations and theory never used clinically. This book is written with how you actually practice in mind. Extensive use of short 'Focus Points' help highlight important principles. Understanding of clinical relevance is primary objective of this book, and as such it aims to take you from ordinary to extraordinary in your ability to create and deliver excellence in your optical career. With this book you will be able to analyze every part of a pair of glasses, pick the best frame for a patients face, learn which lens options complement each other (and which ones don't), be able to research contact lens parameter availability, understand symptoms of the most common eye diseases, and separate yourself from the average optician by addressing special circumstances many opticians may handle incorrectly. In addition to ophthalmic optics, you will learn

techniques for improving sales and service to help you stand out in the mind of your patients. For example, making each patient a spokesperson for the practice, how to diffuse the dissatisfied patient, increasing your average dollar sale without being a salesperson, troubleshooting, and many more patient-centered skills necessary to keep your patients coming back again and again. This book is unlike others in that it emphasizes clinical relevancy, has extensive training on improving patient perception of quality and service, has forms for copying and using immediately to improve efficiency and patient care, and helps you formulate goals for both professional and personal achievement. Second edition includes discussion on digital lenses and lab knowledge for the non-lab optician.

Learn how to achieve excellence and exceed expectations in fitting, dispensing, and customer-centered service. The Optician Training Manual will help you provide effective and consistent optician training, whether you are training new opticians or seasoned ones. Not an ABO study guide filled with optical theory and calculations never used in actual practice. The Optician Training Manual is designed with how you actually work in mind. This book will have new opticians trained and on the floor as quickly as possible and will feel comfortable in that role. Seasoned opticians will improve their decision making skills, taking them to the next level in providing exceptional eyeglasses and service.

The ultimate ophthalmic dispensing reference, this book provides a step-by-step system for properly fitting and adjusting eyewear. It covers every aspect of dispensing — from basic terminology to frame selection to eyewear fitting, adjusting, and repairing. Perfect for both students who are just learning about dispensing and practitioners who want to keep their skills up to date, this resource offers in-depth discussions of all types of lenses, including multifocal, progressive, absorptive, safety, recreational, aspheric, and high index. Plus, it goes beyond the basics to explore the "how" and "why" behind lens selection, to help you better understand and meet your patients' vision needs. A glossary of key terms provides easy access to definitions. Proficiency tests at the end of each chapter reinforce your understanding of the material through multiple-choice, fill-in-the-blank, matching, and true/false questions. A new full-color design with hundreds of illustrations that clearly demonstrate key procedures, concepts, and techniques. Updated coverage of the latest dispensing procedures and equipment. Detailed information on the newest types of lenses, including progressive, absorptive, aspheric, and atoric. Updated photos feature more current frames and lenses, keeping the book up to date with today's eye care trends.

Opticianry is a large and growing ophthalmic specialty. This practical resource provides readers with a basic working knowledge of optics and office procedures. Offering a solid foundation of "need to know" information within about 4 weeks, this handbook is an ideal, basic reference for the non-optician receiving on-the-job training. Essential information is presented in a clear and easily digested format. A trainer schedule/checklist provides consistency in training. Coverage of optics provides readers with the basic knowledge they need. Assessments are included at the end of each section to help assess the level of knowledge. Answers are included at the end of the book. Each level begins with objectives and a list of tasks to master, so readers know exactly what is expected of them prior to beginning each section. Up to date references

and suggested readings refer the reader to additional titles for more in-depth coverage. Basic line drawings of anatomy and spectacle lenses enhance reader understanding and comprehension of each topic presented.

Designed for students and professionals preparing for the ABO certification exam or wishing to quickly brush up on optical formulas, this easy-to-use workbook contains optical formulas, definitions, and walk-through problems with practical examples throughout. Rather than searching through dozens of optics books, readers will find all relevant information here in one source. Coverage includes everything from sine, cosine and tangent to resultant prism and resolving prism to polarized filters - and much more! Features a user-friendly format that facilitates the review process, with practical examples throughout. Provides a convenient review of optical formulas and basic math problems. Begins each chapter with a brief discussion of the topic, then proceeds with exercises and examples; answers are provided at the end of the book. New work-text design allows the reader to complete practice exercises within the book and section being studied. More complex formulas include "how to use the calculator" boxes, and multiple choice review sections have been added to the sections. Advanced exercises such as non-formula exercises are now included throughout.

Both opticians and optometrists are trained to grind and polish lenses and then to take the surfaced lens and finish it by centering it optically and grinding the edges so that the lens fits in the shape of the chosen frame. Thoroughly revised and updated with seven new chapters to cover changes in the industry, this 2nd edition provides a step-by-step understanding of lens finishing for the optometrist or optician. Content has been completely updated, reorganized and expanded to include the most recent industry changes. Updated photos illustrate the most current types of lenses and enhance comprehension of lens finishing. Seven new chapters cover rimless and semi rimless frames; environmental and safety concerns; lens insertion and standard alignment; nylon cord and other groove mountings; lens tinting and engraving; progressive addition lenses; and lens impact and resistance testing. An appendix of specific British Standards allows the book to easily travel to the UK and other countries that fashion their dispensing programs after the UK model. The Lens Centration Skills Series provides exercises to practice lens finishing and reinforce material from the text.

THE COMPLETE OPTOMETRIC ASSISTANT will be your valued guide through all of the above.
