Methods in Pragmatics provides a systematic overview of the different types of data, the different methods of data collection and data analysis used in pragmatic research. It offers authoritative and comprehensive surveys of the entire breadth of methods and methodologies. Part 1 covers introspectional, philosophical and cognitive pragmatics. Part 2 is devoted to experimental pragmatics, including discourse completion and dialogue construction tasks, role-plays and other production and comprehension tasks. Part 3 reviews observational pragmatics including ethnographic and discourse analytic methods, and part 4, finally, is devoted to corpus pragmatics including accounts of corpus compilation, annotation and data retrieval specific to pragmatic research. Each contribution provides a state-of-the-art account of the precise workings of one particular method, its applications in the relevant research literature as well as a critical assessment of its strengths and weaknesses and the type of pragmatic research questions for which it is most suitable.

Abstract: "We describe the transcription conventions currently in use for spontaneous speech at Carnegie Mellon University. Two sets of conventions are described, a detail-rich system for wizard experiments, and a more rigid evaluation system designed for purposes of SLS evaluation. The latter is suitable for automatic scoring using the existing NBS (now NIST) scoring software. A simple wizard transcription is included as well as a sample of live-system transcription together with system output. Transcripts can be used to generate a number of diagnostic metrics useful for system evaluation."

Opening the 9-volume-series Handbooks of Pragmatics, this handbook provides a comprehensive overview of the foundations of pragmatics. It covers the central theories as well as concepts and topics characteristic of mainstream pragmatics, i.e. the most widespread approach to the ways and means of using language in authentic social contexts. The articles provide both state of the art reviews and critical evaluations of research in pragmatics. Topics are thus not only considered within their scholarly context but are also critically evaluated from current perspectives.

Interpersonal communication (IC) is a continuous game between the interacting interactants. It is a give and take - a continuous, dynamic flow that is linguistically realized as discourse as an on-going sequence of interactants' moves. Interpersonal communication is produced and interpreted by acting linguistically, and this makes it a fascinating research area. The handbook, *Interpersonal Communication*, examines how interactants manage to exchange facts, ideas, views, opinions, beliefs, emotion, etc. by using the linguistic systems and the resources they offer. In interpersonal communication, the fine-tuning of individuals' use of the linguistic resources is continuously probed. The language used in interpersonal communication enhances social relations between interactants and keeps the interaction on the normal track. When interaction gets off the track, linguistic miscommunication may also destroy social relationships. This volume is essentially concerned with this fine-tuning in discourse, and how it is achieved among various interactant groups. The volume departs from the following fundamental questions: How do interpersonal relations manifest themselves in language? What is the role of language in developing and maintaining relationships in interpersonal communication? What types of problems occur in interpersonal communication and what kind of strategies and means are used to solve them? How does linguistically realized interpersonal communication interact with other semiotic modes? Interpersonal communication is seen and researched from the perspective of what is being said or written, and how it is realized in various generic forms. The current research also gives attention to other semiotic modes which interact with the linguistic modes. It is not just the social roles of interactants in groups, the possible media available, the non-verbal behaviors, the varying contextual frames for communication, but primarily the actual linguistic manifestations that we need to focus upon when we want to have a full picture of what is going on in human interpersonal communication. It is this linguistic

perspective that the volume aims to present to all researchers interested in IC. The volume offers an overview of the theories, methods, tools, and resources of linguistically-oriented approaches, e.g. from the fields of linguistics, social psychology, sociology, and semiotics, for the purpose of integration and further development of the interests in IC., Topics e.g.: Orientation to interaction as primarily linguistically realized processes Expertise on theorizing and analyzing cultural and situational contexts where linguistic processes are realized Expertise on handling language corpora Expertise on theorizing and analyzing interaction types as genres Orientation to an integrated view of linguistic and non-linguistic participant activities and of how interactants generate meanings and interact with space Expertise on researching the management of the linguistic flow in interaction and its successfulness.
