This book will inspire academics, teachers and trainers to use film and television in their classrooms and to shows them how it might be done. It brings together respected international scholars who recount their experiences of how they have used moving images in their classrooms (defined widely to include distance-learning) with their explanations of why they chose this method of teaching and how they put their intentions into action. The book also illustrates how particular subjects might be taught using film and television as an inspiration to demonstrate the range of opportunities that these media offer. Finally, this book considers some of the practical issues in using film and television in the classroom such as copyright, technology, and the representation of reality and drama in films. This is a 'practical, how to' book that answers the questions of those people who have considered using film and television in their classroom but until now have shied away from doing so. The opportunity to see how others have used film effectively breaks down psychological barriers and makes it seem both realistic and worthwhile.

Listen to people in every field and you'll hear a call for more sophisticated leadership—for leaders who can solve more complex problems than the human race has ever faced. But these leaders won't simply come to the fore; we have to develop them, and we must cultivate them as quickly as is humanly possible. Changing on the Job is a means to this end. As opposed to showing readers how to play the role of

a leader in a "paint by numbers" fashion, *Changing on the Job* builds on theories of adult growth and development to help readers become more thoughtful individuals, capable of leading in any scenario. Moving from the theoretical to the practical, and employing real-world examples, author Jennifer Garvey Berger offers a set of building blocks to help cultivate an agile workforce while improving performance. Coaches, HR professionals, thoughtful leaders, and anyone who wants to flourish on the job will find this book a vital resource for developing their own capacities and those of the talent that they support.

What happens when Edward Schillebeeckx's theology crosses paths with contemporary public theology? This volume examines the theological heritage that Schillebeeckx has left behind, as well as it critically assesses its relevance for temporary theological scene. In tracing the way(s) in which Schillebeeckx observed and examined his own context's increasing secularization and concomitant development toward atheism, the contributors to this volume indicate the potential directions for a contemporary public theology that pursues the path which Schillebeeckx has trodden. The essays in the first part of this volume indicate a different theological self-critique undertaken in response to developments in the public sphere. This is followed by a thorough examination of the degree to which Schillebeeckx succeeded in leading Christian theology ahead without merely accommodating the Christian tradition to current societal trends. The third part of the volume discusses the issues of climate change, social conceptions of progress, as well as the evolutionary understandings of the origins and purpose of religions. The final part examines Schillebeeckx's soteriology to contemporary discussions about wholeness.

The role of the media has become a central part of politics and policy in the twenty-first century. That dominance has led many to suggest a trend of 'dumbing down': the privileging of style over content. In this provocative new book, Maarten Hajer takes issue with the 'dumbing down' thesis both on theoretical and empirical grounds. He aims to show how authoritative governance remains possible in crisis driven circumstances and a highly 'mediatized' world. The book elaborates a communicative understanding of authority, which, the author argues, can create a new basis for authoritative governance in a world marked by political and institutional fragmentation. Extending his discourse-analytical framework, Hajer uses both discursive and dramaturgical methods to study policymakers in their struggle for authority. Three detailed case studies—the plans to rebuild Ground Zero, the aftermath of the assassination of Theo Van Gogh, and the recent role of the British Food Standards Agency—provide a wealth of detail of the dynamics of authority in today's mediatized polity and bring out the peculiar role that crises now play. The argument of the book is that in the age of mediatization governance needs to be 'performed'. Hajer describes a genuinely new authoritative governance that breaks with existing interpretations. He demonstrates ways in which the traditional government of standing institutions and notions of network governance can be combined in actively creating relations with a variety of publics.

The world is witnessing a burgeoning global epidemic of chronic cerebro- and cardiovascular disease and depression disorders. The reader will find this comprehensive book to be a long-needed, up-to-date knowledge base on these increasingly recognized comorbid conditions that have long-term consequences for individual function and well-being and society in general. This comprehensive book outlines the complex and bidirectional relationship between various types of depression and cerebro- and cardiovascular diseases. It is written by a range of experts in the field, including psychiatrists, cardiologists, neuroscientists, psychologists, and epidemiologists, with the aim of presenting and discussing the most recent evidence on the pathophysiology, neurobiology, and clinical presentation of these common and disabling comorbid conditions and the available pharmacological, psychological, and behavioral interventions. By elucidating the underlying clinical and neurobiological mechanisms in the brain and the rich interplay between the body and the brain biology, the book brings together the latest knowledge of this overlapping area in Psychiatry and Cardiology. The clear descriptions of evidence-based approaches to clinical treatment ensure that it will serve as both an up-to-date overview and a future guide for practicing clinicians and graduate students.

Bringing together a range of international scholars, *European Film Remakes* discusses for the first time the textual, socio-cultural, political, and industrial mechanisms and singularities of the film remake in a European context. Offering a variety of historical, theoretical, and methodological approaches, the book is illustrated by a wide range of case studies from across Europe, including films like *A Bigger Splash*, *Open Your Eyes* and *Perfect Strangers*. Although commonly understood as a typical Hollywood practice, this book demonstrates how film remakes are, and always have been, a significant part of the European film culture and industry. Eduard Cuelenaere is Postdoctoral Researcher in the Department of Communication Sciences at Ghent University. Gertjan Willems is Assistant Professor in the Departments of Literature and Communication Sciences at the University of Antwerp and Postdoctoral Fellow of the Research Foundation - Flanders (FWO) in the Department of Communication Sciences at Ghent University. Stijn Joye is Associate Professor in the Department of Communication Sciences at Ghent University.

This book engages with Antwerp in the Renaissance. Bringing together several specialists of sixteenth-century Antwerp, it offers new research results and fresh perspectives on the economic, cultural and social history of the metropolis in the sixteenth century. Recurrent themes are the creative ways in which the Italian renaissance was translated in the Antwerp context. Imperfect imitation often resulted from the specific social context in which the renaissance was translated: Antwerp was a metropolis marked by a strong commercial ideology, a high level affluence and social inequality, but also by the presence of large and strong middling layers, which contributed to the city's 'bourgeois' character. The growth of the Antwerp market was remarkable: in no time the city gained metropolitan status. This book does a good job in showing how quite a few of the Antwerp 'achievements' did result from the absence of 'existing structures' and 'examples'. Moreover, the city and its culture were given shape by the many frictions, and uncertainties that came along with rapid urban growth and religious turmoil.

This book concentrates exclusively on the dialogic turn in the governance of science and the environment. The starting point for this book is the dialogic turn in the production and communication of knowledge in which practices claiming to be based on principles of dialogue and participation have spread across diverse social fields. As in other fields of social practice in the dialogic turn, the model of communication underpinning science and environmental governance is dialogue in which scientists and citizens engage in mutual learning on the basis of the different knowledge forms that they bring with them. The official aim is to involve citizens in processes of decision-making on scientific and environmental issues, including issues relating to the built environment such as urban planning. The attempt in this book has been made to build bridges across the fields of science and technology studies, environmental studies, and media and communication studies in order to provide theoretically informed and empirically rich accounts of how citizen voices are articulated, invoked, heard, marginalised or silenced in science and environment communication.

This volume provides an updated review of imaging abnormalities in orthopedic sports injuries. The first part of the book contains background information on relevant basic science and general imaging

principles in sports traumatology. The second part comprises a topographic discussion of sports injuries. Each chapter highlights the merits of different imaging techniques, focused on a specific clinical problem. In the third part, natural history, monitoring and follow-up imaging are discussed.

This open access book coherently gathers well-founded information on the fundamentals of and formalisms for modelling cyber-physical systems (CPS). Highlighting the cross-disciplinary nature of CPS modelling, it also serves as a bridge for anyone entering CPS from related areas of computer science or engineering. Truly complex, engineered systems—known as cyber-physical systems—that integrate physical, software, and network aspects are now on the rise. However, there is no unifying theory nor systematic design methods, techniques or tools for these systems. Individual (mechanical, electrical, network or software) engineering disciplines only offer partial solutions. A technique known as Multi-Paradigm Modelling has recently emerged suggesting to model every part and aspect of a system explicitly, at the most appropriate level(s) of abstraction, using the most appropriate modelling formalism(s), and then weaving the results together to form a representation of the system. If properly applied, it enables, among other global aspects, performance analysis, exhaustive simulation, and verification. This book is the first systematic attempt to bring together these formalisms for anyone starting in the field of CPS who seeks solid modelling foundations and a comprehensive introduction to the distinct existing techniques that are multi-paradigmatic. Though chiefly intended for master and post-graduate level students in computer science and engineering, it can also be used as a reference text for practitioners.
